Course outcome (Course Skill Set)

At the end of the course the student will be able to:

CO1	Demonstrate proficiency in handling loops and creation of functions.
CO2	Identify the methods to create and manipulate lists, tuples and dictionaries.
CO3	Develop programs for string processing and file organization
CO4	Interpret the concepts of Object-Oriented Programming as used in Python.

Programming Exercises:

- 1.a. Develop a program to read the student details like Name, USN, and Marks in three subjects display the student details, total marks and percentage with suitable messages.
- b. Develop a program to read the name and year of birth of a person. Display whether the person is a senior citizen or not.
- 2.a. Develop a program to generate Fibonacci sequence of length (N). Read N from the console.
- b. Write a function to calculate factorial of a number. Develop a program to compute binomial coefficient (Given N and R).
3. Read N numbers from the console and create a list. Develop a program to print mean, variance and standard deviation with suitable messages.
4. Read a multi-digit number (as chars) from the console. Develop a program to print the frequency of each digit with suitable message.
5. Develop a program to print 10 most frequently appearing words in a text file. [Hint: Use dictionary with distinct words and their frequency of occurrences. Sort the dictionary in the reverse order of frequency and display dictionary slice of first 10 items]
6. Develop a program to sort the contents of a text file and write the sorted contents into a separate text file. [Hint: Use string methods strip(), len(), list methods sort(), append(), and file methods open(), readlines(), and write()].
7. Develop a program to backing Up a given Folder (Folder in a current working directory) into a ZIP File by using relevant modules and suitable methods.
8. Write a function named DivExp which takes TWO parameters a, b and returns a value c ($c=a/b$). Write suitable assertion for $a>0$ in function DivExp and raise an exception for when $b=0$. Develop a suitable program which reads two values from the console and calls a function DivExp.
9. Define a function which takes TWO objects representing complex numbers and returns new complex number with a addition of two complex numbers. Define a suitable class 'Complex' to represent the complex number. Develop a program to read N ($N \geq 2$) complex numbers and to compute the addition of N complex numbers.
10. Develop a program that uses class Student which prompts the user to enter marks in three subjects and calculates total marks, percentage and displays the score card details. [Hint: Use list to store the marks in three subjects and total marks. Use `__init__()` method to initialize name, USN and the lists to store marks and total, Use `get Marks()` method to read marks into the list, and `display()` method to display the score card details.]

Assessment Details (both CIE and SEE)

The weightage of Continuous Internal Evaluation (CIE) is 50% and for Semester End Exam (SEE) is 50%. The minimum passing mark for the CIE is 40% of the maximum marks (**20 Marks** out of 50). The minimum passing mark for the SEE is 35% of the maximum marks (**18 Marks** out of 50). A student shall be deemed to have satisfied the academic requirements and earned the credits allotted to each subject/course if the student secures not less than 35% (**18 Marks** out of 50) in the semester-end examination(SEE), and a minimum of 40% (**40 Marks** out of 100) in the sum total of the CIE (Continuous Internal Evaluation) and SEE (Semester End Examination) taken together.

Continuous Internal Evaluation(CIE):

The CIE marks for the theory component of the IC shall be **25 Marks** and for the laboratory component **25 Marks**.

CIE for the theory component of the IC

- Three Tests each of **40 Marks** scale down to **15 Marks** and average of 3 test will be taken. The test will be after the completion of the syllabus of 35-40%, 65-70%, and 90-100% respectively.
 - a) One Assignments and one quizzes/one seminars or b) one field survey and report presentation or c) one-course project with report totaling **10 Marks**.

Total Marks scored (test + assignments) will be for $15+10 = \mathbf{25 Marks}$

CIE for the practical component of the IC

- On completion of every experiment/program in the laboratory, the students shall be evaluated and marks shall be awarded on the same day. The **15 Marks** are for conducting the experiment and preparation of the laboratory record, the other **10 Marks** shall be for the test conducted at the end of the semester.
- The CIE marks awarded in the case of the Practical component shall be based on the continuous evaluation of the laboratory report. Marks of all “experiments write- ups + conduction + lab record” = $10+10+10 = \mathbf{30 Marks}$ respectively. the total marks for all the experiments are added and scaled down to **15 Marks**.
- The laboratory test (**duration 02 hours**) at the end of the 15th week of the semester /after completion of all the experiments (whichever is early) shall be conducted for **50 Marks** and scaled down to **10 Marks**.
- Total Marks scored for the laboratory component of IC/IPCC (Lab Conduction + Lab Test) will be for $15+10 = \mathbf{25 Marks}$
- The minimum marks to be secured in CIE to appear for SEE shall be **10 Marks** (40% of maximum marks) in the theory component and **10 Marks** (40% of maximum marks) in the practical component. The laboratory component of the IC/IPCC shall be for CIE only. However, in SEE, the questions from the laboratory component shall be included. The theory component of the IC shall be for both CIE and SEE.

Semester End Examination(SEE):

Theory SEE will be conducted by Institution as per the scheduled timetable, with common question papers for the subject (**duration 03 hours**)

- The question paper shall be set for **100 Marks**. The medium of the question paper shall be English. The duration of SEE is 03 hours.
- The question paper will have 10 questions. Two questions per module. Each question is set for **20 Marks**. The students have to answer 5 full questions, selecting one full question from each module. The student has to answer for **100 Marks** and **marks scored out of 100 shall be proportionally reduced to 50 Marks**.

There will be 2 questions from each module. Each of the two questions under a module (with a maximum of 3 sub- questions), **should have a mix of topics** under that module.
